DETAILED ACTION

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claim 3 and 13-14 as well as 8, 10, 12 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 3 and 1-2 and 8, 10, 12 of prior U.S. Patent No. 6,335,231. This is a double patenting rejection.

Allowable Subject Matter

Claims 1-2 and 4-7,9,11 are allowed. These claims are identical to claims 1-2 and 4-7 of U.S. Patent 6,335,231, without the limitation of the second heat treatment. The most relevant reference, as in the parent case, is Hasegawa. The Hasegawa patent, which was the main reference teaching a silicon substrate with a main face of (110) did not teach a method of forming a semiconductor device in which the active layer of the device consisted of a single crystal layer having a face of (110) which was originally part of the substrate. In Hasegawa, the active device layer is a single crystal layer having a (110) face which was grown on top of the substrate using the substrate

as a seed, and was therefore on the other side of the insulating layer, unlike the process described in independent claims 1-2.
